HTW-5 STEAM WALLPAPER STRIPPER

A high performance steam wallpaper stripper for the hire, rental and professional decorating market the HTW-5 is easy to use, robust and features a unique anti-scald system.

DESCRIPTION

A key hire and rental product for all markets, the performance, high quality and robust design is recognised by professional decorators and homeowners as the number one steamer for the toughest stripping jobs.

USES

The HTW-5 Steam Wallpaper Stripper will remove vinyl, foil, flock, woodchip and multi-layered papers, including painted over wallpaper, with ease. The HTW-5 is even effective on non-paper based wall coverings such as hessian fixed with UPVA glues.

FEATURES

A unique, two-stage anti-scald system prevents the sudden escape of hot water and steam should the user tamper with the steam cap when the steamer is in use. First, excess pressure is safely vented when the steam cap locking lever is released. Second, should the steam cap be suddenly removed, a valve inside the steam tank activates and stops the dangerous release of hot water and steam eliminating scalding due to operator misuse.

The long life heating element is designed especially for the demands of steam wallpaper stripping, that is, constant heating of water over long periods of time and then being immersed in cold water when refilled, without twisting, splitting or deforming. A cool running hose and fully protected steam tank keep the operator's arms and legs protected at all times. Four castors provide excellent mobility making the HTW-5 easy to move around a room without the risk of picking up a hot steamer.

Simply fill with hot or cold tap water and connect to the power supply. The HTW-5 will steam-up in 10 to 25 minutes and continue to run for up to an hour and a half before switching off automatically when a low water level is reached. The user simply disconnects from the power supply, waits 2 minutes to allow the steamer to cool, and then refills. This eliminates the need for the user to remember to constantly check the water level and the need for troublesome switches, buzzers and sight glasses.

SPECIFICATIONS

Power Supply:	220/250V	50/60Hz
	110/120V	50/60Hz
Heater Element:	220/250V	2500 watt
	110/120V	1500 watt
Power Consumption:	220/250V	10.5A
	110/120V	13.5A
Tank Capacity:	7 litre (1.5 gal / 1.85 US gal)	
Steam Plate Weight:	800g (28oz)	
Weight Dry:	7kg (15lbs)	
Warranty:*	Steam tank lifetime warranty, all other components 2 years.
