

HT8 DRUM FLOOR SANDER FLEXIBLE GRIP HANDLE BRACKET

Your new HT8 Drum Floor Sander features a flexible grip handle bracket, a new design that improves performance, control and operator comfort.

The handle bracket provides the connection point between the floor sander body and the handle assembly. Traditionally made from aluminium alloy the new HT8 Handle Bracket is now made from a special blend of ABS.

The in-built flexibility of this new design provides a form of damping, just like a cars suspension, allowing the floor sander body to 'float' across the floor surface.

BENEFITS

- Smoother sanding performance as the floor sander drum follows the contours of the floor.
- Reduced high spot knocking as the sanding drum rides high spots for more effective blending.
- Even easier operation as the flexibility of the handle bracket improves operator feel allowing the sanding drum to be raised and lowered with more control.
- Improved operator comfort.
- Reduces risk of operator misuse by absorbing the operators hand and arm movements that might change the position of the sanding drum.
- Handle assembly is easier to fit, adjust and clamp into position.

HANDLE BRACKET

Part No: 1 6081 5
Description: Bracket Handle
Shipping Weight: 0.4 kg (0.9lbs)
